

Analysis of Nonresponse Bias in the 2004 NAEP Long Term Trend

Jennifer Czuprynski

August 27, 2004

The analysis of nonresponse bias was conducted for all ages of the 2004 NAEP Long Term Trend. For each of these studies, the response rates at both the school and student level are close to or less than 85 percent. The analysis consists of tables showing weighted response rates for various school and student-level characteristics of interest, produced separately for each age. At the school level, there is also a comparisons of means table for the size and race variables. The weight used at the school level is the school base weight. The weight used at the student level is the student base weight. The student response rate is computed within responding schools.

The results showing weighted response rates for various characteristics of interest are presented. At the school level, the characteristics of interest are Census Region, public or private affiliation, reporting subgroup for private schools, type of location, estimated grade enrollment, and percentage of students in each race category. At the student level, the characteristics of interest are the students' sex, race, free lunch eligibility, session, whether the student received a reading or mathematics assessment, whether the student was in a high or low grade for his/her age, whether or not the student receives Title 1 assistance, and whether or not the student is classified as SD or LEP. These characteristics were available for each school and student, regardless of response status. The p-values from Rao-Scott Chi-square tests of association between each characteristic of interest and response status are also reported. The significant findings from the Chi-square tests and mean comparisons (i.e., with p-values less than 0.05) are summarized below. These characteristics of interest may be related to response status. The corresponding tables follow.

Table 1. Characteristics related to response.

Age	Level	Response Rate	Characteristics with a p-value less than 0.05
Age 9	School	85.73	Public/Private Affiliation, Reporting subgroup, Type of location, Estimated Age Enrollment, Percentage of Black students
Age 9	Student	94.32	Free Lunch Eligibility, SD, LEP
Age 13	School	81.45	Reporting Subgroup, Estimated Age Enrollment, Percentage Black
Age 13	Student	92.2	Public/Private Affiliation, Race, High or Low Grade, Free Lunch Eligibility, Title 1, SD
Age 17	School	76.96	Public/Private Affiliation, Reporting Subgroup, Percentage of Asian Students
Age 17	Student	75.18	Race, High or Low Grade, Free Lunch Eligibility, SD

Table 2. 2004 NAEP Long Term Trend Age 9 - Percentages and counts of responding and nonresponding schools by various subgroups
